

FFXIV Character Search - User Guide

Development Team

February 11, 2025

1 Introduction

FFXIV Character Search is a web application that allows users to search for and view character information from Final Fantasy XIV using the Lodestone database.

2 Prerequisites

Before running the application, ensure you have the following installed:

- Node.js (version 14 or higher)
- npm (usually comes with Node.js)
- Git (for version control)

3 Installation

3.1 Clone the Repository

First, clone the repository using git:

```
1 git clone <repository-url>
2 cd ffxiv-character-search
```

3.2 Install Dependencies

Install all required dependencies using npm:

```
1 npm install
```

4 Building the Application

To build the application, run:

```
1 npm run build
```

This command will:

- Bundle all JavaScript files using webpack
- Create the production-ready bundle in public/dist/

5 Running the Application

5.1 Development Mode

To run the application in development mode with auto-reload:

```
1 npm run dev
```

The application will be available at `http://localhost:3000`

5.2 Production Mode

To run the application in production mode:

```
1 npm start
```

6 Using the Application

6.1 Searching for Characters

1. Enter a character name in the search field
2. Optionally, enter a World and/or Data Center
3. Click the "Search" button
4. Results will appear below the search form

6.2 Viewing Character Details

1. From the search results, click "Select Character" on any character card
2. The character's detailed information will be displayed, including:
 - Character portrait and basic information
 - Combat jobs (Tanks, Healers, DPS)
 - Crafting and Gathering jobs

7 Troubleshooting

7.1 Common Issues

- If the application fails to start, ensure all dependencies are installed
- If searches fail, check your internet connection
- If character details don't load, the Lodestone might be undergoing maintenance

8 Development

8.1 Project Structure

```
1 ffxiv-character-search/  
2   public/  
3     css/  
4     dist/  
5     index.html  
6   src/  
7     components/  
8     utils/  
9     index.js  
10    server.js  
11    package.json  
12    webpack.config.js
```
